

## How to get to LABIMA

Florence is well-connected with the rest of Italy and with Europe, and is easy to get to by air or land. Florence airport (4km far from the city center) and Pisa Airport (80km far from the city center) are both served by the main international companies as well as by some EU low cost companies. You can get to Florence flying from all the major EU capitals for less than 100 euros! Arriving by plane in Florence or Pisa airports, you can easily reach the city centre by bus, taxi or train.

**LABIMA address:**  
Via di Santa Marta, 3  
50039, Florence  
Italy

## DualSPHysics: DualSPHysics

Numerical tool in coastal engineering and marine energy

LABIMA, University of Florence  
27th September 2018

# Presentation

The numerical modelling can represent a useful and complementary tool to physical model tests. Sophisticated tools are now at a formative stage and here we are actively developing the novel, flexible numerical technique Smoothed Particle Hydrodynamics (SPH). As a meshless and Lagrangian technique, SPH is ideally suited to fluid and solid mechanics with highly nonlinear deformation and is opening new avenues of activity in several areas, notably fluid-structure interaction, multi-phase flows and importantly, engineering application and design. SPH describes a fluid by replacing its continuum properties with locally smoothed quantities at discrete Lagrangian locations. SPH has become increasingly popular in recent years as a novel technique to model the violent hydrodynamics in wave breaking, wave-structure interaction, floating objects, etc.

The DualSPHysics code has been developed to use SPH for real engineering problems. DualSPHysics is open source and can be freely downloaded from the website [www.dual.sphysics.org](http://www.dual.sphysics.org). The code comes with dedicated pre-processing software which can use a whole range of different input files for the geometries including CAD, STL, PLY files, etc., making setting up simulations straightforward. Advanced post-processing tools enable users to measure physical magnitudes of any flow property at arbitrary locations in the domain.

The DualSPHysics code has already been applied to coastal applications (including validation with experiments) such as: i) to simulate wave interaction with complex geometries such as rubble mound breakwaters, ii) to assess accurately the forces exerted by sea waves on coastal defences, iii) to simulate floating WEC devices under the action of extreme waves, including wave breaking and overtopping, in order to study their survivability and efficiency to absorb the available wave energy in extreme conditions

DualSPHysics code can be proposed as complementary tool to physical model experiments for a preliminary design of the coastal defences and WEC devices.

# Contents of the course

The first part of the course will be focused on the general description of the SPH methodology, functionalities implemented in the DualSPHysics code and examples of application in coastal engineering and marine energies.

The second part includes a hands-on session with examples of dam-breaks, sloshing tanks, floating objects and wave tanks. This practical session includes pre-processing, execution and post-processing of the results (and validation with experimental data).

# Date and venue

The course (8 hours duration) will be next 27th September 2018 in the “Laboratorio di Ingegneria Marittima” (LABIMA) in the University of Florence (Italy).

# Registration

If you are interested to attend please contact Professor Lorenzo Cappietti ([lorenzo.cappietti@unifi.it](mailto:lorenzo.cappietti@unifi.it)).

# Programme

**08h30 Reception**

**09h00 Presentation of the course**

Lorenzo Cappietti (LABIMA)

Moncho Gómez Gesteira (UVIGO)

**09h15 "Introduction to SPH"**

Moncho Gómez Gesteira (UVIGO)

**10h00 "The DualSPHysics code"**

José M. Domínguez (UVIGO)

**10h45 Coffee break**

**11h30 "Applications in coastal engineering"**

Alex Crespo (UVIGO), Corrado Altomare (UGENT-FHR)

**12h15 "Introduction to Practical Session"**

**13h00 Lunch**

**14h30 "Practical Session: Simulation and Postprocessing"**

**18h00 Close**

**The work is also funded by the Ministry of Economy and Competitiveness of the Government of Spain under project "WELCOME ENE2016-75074-C2-1-R"**
